

# ascofizz.com

## SEO / GEO / AEO Audit Report

### FULL AUDIT

2026-07-28

Claude Skill and Plugin by Alex Labat

## Executive Summary

ascofizz.com is a technically well-built single-page storefront that was, until this audit, marketed as something it is not. The domain is the direct-to-consumer brand, but its title, description and structured data described a WHO-GMP contract manufacturer — the business of its parent, Ascovita Healthcare. The head carried 72 mentions of “B2B” and 35 of “manufacturer”, so the consumer store competed with its own parent for factory keywords while under-targeting the purchase queries it needs.

Two findings were liabilities rather than missed opportunities. The structured data asserted eight aggregate ratings totalling roughly 1,811 reviews with named authors, while the reviews table holds zero rows and the page reads “No ratings yet” — fabricated review markup that contradicts the rendered page is a manual-action risk, not a ranking asset. Separately, fourteen of the fifteen product URLs in the sitemap pointed at products that do not exist, while all sixteen real products were absent.

The strongest asset is the answer-engine layer: a 22-entry FAQPage already answering the questions Indian supplement shoppers type. That, plus a differentiator competitors cannot copy — Ascofizz ships direct from the factory that makes it — is the foundation to build on.

| Dimension | Score | Status   | Key Takeaway                                                                                                              |
|-----------|-------|----------|---------------------------------------------------------------------------------------------------------------------------|
| SEO       | 6/10  | On Track | Solid technical base undone by a sitemap pointing at products that do not exist and a title targeting the wrong audience. |
| GEO       | 5/10  | On Track | Entity confusion: the Ascofizz organization was described as Ascovita, so AI engines learned the wrong brand.             |
| AEO       | 8/10  | Strong   | 22-question FAQPage with real consumer intent — the site’s best search asset.                                             |
| Combined  | 19/30 |          |                                                                                                                           |

## Pages Audited

ascofizz.com is a single-document application: every route below is a section of index.html shown by the router, so all were audited from source rather than by crawling rendered URLs. Source auditing is strictly more accurate here — it sees markup a crawler only reaches after executing JavaScript.

| Route           | Type                | Notes                                                 |
|-----------------|---------------------|-------------------------------------------------------|
| /               | Homepage            | LCP image was lazy-loaded; now eager at high priority |
| /shop           | Category            | 16 products render client-side from PRODUCTS          |
| /product/{slug} | Product detail (16) | Only 1 of 15 sitemap slugs previously resolved        |
| /about          | Trust / E-E-A-T     | Named co-founder, address, certifications present     |

| Route    | Type             | Notes                                                              |
|----------|------------------|--------------------------------------------------------------------|
| /blog    | Content hub      | Index renders; posts are client-side                               |
| /contact | Local signals    | Full NAP present and consistent                                    |
| /faq     | AEO              | 22 Q&As, all mapped into FAQPage schema                            |
| /advisor | Interactive tool | No indexable text content                                          |
| /b2b     | Removed          | Off-site redirect to ascovita.com — correctly dropped from sitemap |

## SEO Analysis — 6/10 On Track

### Technical On-Page

| Signal                     | Finding                                                                                                                                                                                  | Status          |
|----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| <b>Title tag</b>           | Was 93 characters and led with “Nutraceutical Manufacturer” — the parent’s positioning. Now “Buy Effervescent Vitamin Tablets Online India   Ascofizz” (56 chars).                       | Good            |
| <b>Meta description</b>    | Was 182 chars and opened with “Ascovita” on an Ascofizz domain. Now 161 chars, consumer-framed, leading with the direct-from-factory claim.                                              | Good            |
| <b>Canonical</b>           | Self-referencing to https://www.ascofizz.com/.                                                                                                                                           | Good            |
| <b>Robots meta</b>         | index, follow with max-snippet:-1. Verified under a Googlebot user agent: no accidental noindex.                                                                                         | Good            |
| <b>Heading hierarchy</b>   | 17 h1 elements exist in the raw document because every SPA page ships at once; only one is visible after render. Acceptable for this architecture, not ideal for non-rendering crawlers. | Needs Attention |
| <b>Sitemap accuracy</b>    | 14 of 15 product URLs pointed at non-existent products; all 16 real products missing. Regenerated from the live catalogue so every path equals slugify(name).                            | Good            |
| <b>Image alt text</b>      | 7 images had no alt attribute. All 29 now carry descriptive alt text.                                                                                                                    | Good            |
| <b>Duplicate meta tags</b> | 22 duplicated tags in head, including two contradicting twitter:title and twitter:description values. Deduplicated.                                                                      | Good            |
| <b>Open Graph image</b>    | og:image and twitter:image pointed at a retired Wix account. Replaced with a generated 1200×630 card served from this repo.                                                              | Good            |
| <b>hreflang</b>            | Absent. Added en-IN and x-default for an India-first store.                                                                                                                              | Good            |

## Content Quality

| Signal               | Finding                                                                                                                                                                    | Status          |
|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| Keyword focus        | 72 “B2B” and 35 “manufacturer” mentions in the head of a consumer storefront, splitting topical focus with the parent domain. B2B service schema removed from this domain. | Good            |
| Product descriptions | All 16 products carry substantive descriptions with ingredients and usage.                                                                                                 | Good            |
| Review content       | Zero reviews in the database. The honest empty state is correct, but there is no user-generated content signal at all.                                                     | Needs Attention |
| Freshness signals    | No visible published or updated dates on blog content.                                                                                                                     | Needs Attention |

## Structured Data

| Signal             | Finding                                                                                                                                                                                                                                | Status |
|--------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|
| Fabricated ratings | Eight aggregateRating blocks totalling ~1,811 reviews plus named review authors, against an empty reviews table and a page reading “No ratings yet”. Contradicts the rendered page; a manual-action risk. All removed.                 | Good   |
| Product coverage   | Schema described 8 of 16 products. Now all 16, with INR pricing, stock-derived availability and ingredient properties.                                                                                                                 | Good   |
| Entity model       | Organization was named Ascofizz but described as Ascovita, with a sameAs pointing at a GitHub Pages host and an invented Wikidata path. Rebuilt: Ascofizz as OnlineStore, Ascovita Healthcare as parentOrganization on its own domain. | Good   |
| Schema validity    | Single @graph, 11 nodes, parses cleanly.                                                                                                                                                                                               | Good   |

## GEO Analysis — 5/10 On Track

Generative Engine Optimization is about being the source an AI answer cites. That depends less on keywords than on whether the engine can tell exactly which entity it is reading about, and whether the page states citable facts.

## E-E-A-T Assessment

| Signal            | Finding                                                                                              | Status          |
|-------------------|------------------------------------------------------------------------------------------------------|-----------------|
| Named authorship  | Co-founder Aamin Ghachivahora named in Person schema and on the About page.                          | Good            |
| Contact / NAP     | Full address in Anand, Gujarat, phone and email, consistent across markup and page.                  | Good            |
| Certifications    | WHO-GMP and FSSAI stated with credential schema.                                                     | Good            |
| Third-party proof | No press mentions, external citations or independent lab links. All trust signals are self-asserted. | Needs Attention |

## Content for AI Synthesis

| Signal                | Finding                                                                                                                                                                                                                                                                                                 | Status          |
|-----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| Entity clarity        | The single largest GEO defect. The Ascofizz organization was described in prose as Ascovita, and the FAQ answered “What is Ascofizz?” with “Ascovita (ascovita.com) is...”. An engine reading that learns the brand is Ascovita. Fixed across schema, ai-description and perplexity-context.            | Good            |
| sameAs integrity      | Included a GitHub Pages URL and <a href="https://www.wikidata.org/wiki/ascovita_healthcare">https://www.wikidata.org/wiki/ascovita_healthcare</a> , which is not a valid Wikidata identifier and will 404. Bad sameAs entries weaken entity resolution. Removed; ascovita.com added as the parent link. | Good            |
| AI-specific meta      | Dedicated ai-description and perplexity-context tags — ahead of most competitors. Both rewritten to lead with Ascofizz and state the parent relationship.                                                                                                                                               | Good            |
| Citable specifics     | Named facility location, certification bodies, ingredient lists, exact INR prices, free-shipping threshold.                                                                                                                                                                                             | Good            |
| Crawlability for AI   | robots.txt now names GPTBot, OAI-SearchBot, PerplexityBot, ClaudeBot, Google-Extended and Applebot explicitly, and blocks commercial scrapers.                                                                                                                                                          | Good            |
| JavaScript dependency | All body content renders client-side. Engines that do not execute JavaScript see only the head. The biggest remaining GEO constraint.                                                                                                                                                                   | Needs Attention |

## AEO Analysis — 8/10 Strong

| Signal                    | Finding                                                                                                                                                                                                                                       | Status  |
|---------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| FAQ schema                | 22 questions in valid FAQPage markup, covering exactly the queries Indian shoppers type: “best glutathione supplement brand in India”, “best vegan B12 supplement in India”, “which magnesium is best for sleep”. The site’s strongest asset. | Good    |
| Question-phrased headings | FAQ questions use natural language matching real search phrasing.                                                                                                                                                                             | Good    |
| Definition patterns       | “What is Ascofizz?” now opens with a clean “Ascofizz is...” definition — the pattern featured snippets extract.                                                                                                                               | Good    |
| Speakable schema          | SpeakableSpecification present for voice assistants.                                                                                                                                                                                          | Good    |
| Local signals             | NAP complete and consistent; LocalBusiness and GeoCoordinates present.                                                                                                                                                                        | Good    |
| HowTo schema              | No step-by-step markup. “How to use an effervescent tablet” is an obvious HowTo candidate the brand could own outright.                                                                                                                       | Missing |
| Comparison tables         | No table markup. “Effervescent vs capsule absorption” would be a strong table-snippet target.                                                                                                                                                 | Missing |

## Priority Recommendations

| Priority  | Issue                                                                                                                    | Dimension | Effort | Impact    |
|-----------|--------------------------------------------------------------------------------------------------------------------------|-----------|--------|-----------|
| Critical  | Fabricated review markup — 1,811 reviews asserted against an empty table.                                                | SEO       | Done   | Very High |
| Critical  | Sitemap listed 14 product URLs that do not exist; all 16 real products missing.                                          | SEO       | Done   | Very High |
| Critical  | Entity mismatch — Ascofizz described as Ascovita throughout schema and AI meta.                                          | GEO       | Done   | Very High |
| High      | Consumer domain targeting manufacturer keywords, cannibalising the parent.                                               | SEO       | Done   | High      |
| High      | LCP hero image marked loading="lazy", delaying the largest paint.                                                        | SEO       | Done   | High      |
| High      | Body content is JavaScript-only. Prerender shop and product routes to static HTML so non-rendering AI crawlers see them. | GEO       | High   | High      |
| Medium    | Add HowTo schema for “how to use an effervescent tablet”.                                                                | AEO       | Low    | Medium    |
| Medium    | Add a comparison table for effervescent vs capsule absorption.                                                           | AEO       | Low    | Medium    |
| Medium    | No third-party trust signals — press, lab reports, independent certification links.                                      | GEO       | Medium | Medium    |
| Quick Win | Publish dates on blog posts for freshness signals.                                                                       | SEO       | Low    | Medium    |
| Quick Win | Seed genuine reviews. Rating schema can legitimately return once real ratings exist.                                     | SEO       | Low    | High      |

## Competitive Position

| Competitor                         | Their claim                                                                                                               | Where Ascofizz can win                                                                                            |
|------------------------------------|---------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------|
| <b>Fast&amp;Up</b>                 | “India’s first effervescent nutrition brand” — owns the category term, backed by Swiss effervescent technology messaging. | Cannot out-rank them on “first”. Compete on origin: they market a technology, Ascofizz owns the plant.            |
| <b>Swisse</b>                      | International brand trust, wide retail distribution.                                                                      | Price and directness. No importer or distributor margin in an Ascofizz price.                                     |
| <b>Wellbeing Nutrition</b>         | Ingredient storytelling — amla, acerola, elderberry sourcing narratives.                                                  | Match the ingredient depth, then add batch traceability, which a marketing-led brand cannot offer.                |
| <b>HCP Wellness / Hetal Pharma</b> | Contract manufacturers, one also in Anand. They rank for the manufacturer terms.                                          | These are Ascovita’s competitors, not Ascofizz’s. Removing B2B language from this domain stops the two colliding. |

The defensible position is narrow but real: every competitor above either outsources manufacturing or sells someone else's formulation. Ascofizz is the only one shipping from a facility its own parent operates. "Direct from the factory that makes it" is the one claim none of them can copy, and it should anchor the homepage, the product pages and the FAQ.

## What's Working Well

| Strength                      | Evidence                                                                                                                        |
|-------------------------------|---------------------------------------------------------------------------------------------------------------------------------|
| <b>22-question FAQPage</b>    | Covers real long-tail consumer queries verbatim. Most competitors have nothing comparable.                                      |
| <b>AI-specific meta tags</b>  | ai-description and perplexity-context tags — a GEO practice most Indian supplement sites have not adopted.                      |
| <b>Genuine differentiator</b> | Owens manufacturing through the parent company. Rare among D2C supplement brands, impossible for rivals to imitate.             |
| <b>Honest review handling</b> | The code deliberately shows "No ratings yet" rather than filler. Once the schema matched that honesty, it became a trust asset. |
| <b>Complete local signals</b> | Consistent NAP, GeoCoordinates, named co-founder, stated certifications.                                                        |
| <b>Core Web Vitals</b>        | After this pass: FCP 1494ms → 564ms, LCP 1360ms → 552ms, CLS 0, on a throttled phone over 1.6Mbps.                              |

## Glossary

### SEO — Search Engine Optimization

Ranking in the classic list of blue links. Driven by relevance, technical health and links.

### GEO — Generative Engine Optimization

Being cited inside AI-generated answers from ChatGPT, Perplexity, Gemini and Google AI Overviews. These systems synthesise an answer and name a few sources; being one depends on the engine recognising your brand as a distinct entity and finding citable facts.

### AEO — Answer Engine Optimization

Winning the single extracted answer: featured snippets, People Also Ask, voice assistants. Rewards clear question-and-answer structure and plain definitions.

### E-E-A-T

Experience, Expertise, Authoritativeness, Trustworthiness — Google's framework for judging whether a source deserves belief. Weighted heavily for health and supplement topics.

### LCP / CLS

Largest Contentful Paint: time until the main content appears. Cumulative Layout Shift: how much the page jumps while loading. Both are ranking factors.
